

Claims for the Plastic Film Protector For Teflon Coated Skillets;

A device for protecting the teflon coating on skillets,  
consisting of:

- (a) five polyethylene film sheets of the same dimensions,  
positioned evenly on top of one another, and heat fused  
together on three sides, whereby
- (b) heat fusion of the plastic film creates four separate  
pockets into which skillets are inserted for protection  
during storage, and
- (c) eliminates the plastic film pockets from buckling and  
shifting when skillets are either inserted or removed.
